Press release **June 19, 2017**

Doxis4 installation is certified for ISO 14641-1: 2012

The smart "Fort Knox" for information

**Bonn, June 19, 2017. Data protection, access protection, immutability —
these requirements are covered by ISO 14641-1: 2012 in its specifications
concerning the design and the operation of an information system for
electronic information preservation. The independent certification
authority SP Certifications London* has certified that the Doxis4 iECM
suite conforms to this high international standard. Information stored in
Doxis4 fulfills rigid security standards and is protected from manipulation
and unauthorized access.**

If documents must be used as valid evidence in a court or administrative
process, then their immutability must be irrefutable. In situations like these, the
international norm ISO 14641-1: 2012 poses a number of organizational
procedures and technical requirements for capturing, storing and accessing
electronic documents and processes. With Doxis4, SER customers are able to
fulfill these requirements according to the most rigid security standards.
"Information is the most valuable good that a company has to protect! With
Doxis4, our customers can create their own ISO-14641-1: 2012-certified 'Fort
Knox' for their data and documents, which are always stored securely and
protected from attacks," explains Klaus Eulenbach, SER's Head of Technology.

Security is a top priority for SER. Already certified according to ISO 16175-2 (for
records management), Doxis4 has achieved one of the highest possible security
levels for ECM systems. The installation certification according to ISO 14641-1:
2012 reinforces this even further. The certifications are strong proof for
international firms that Doxis4 is the right ECM solution to fulfill international
requirements for handling information subject to retention.

About ISO 14641-1: 2012 (electronic archiving – part 1)

ISO 14641-1: 2012 is based on the French AFNOR standard Z42-013 Systèmes
d'Archivage Electronique (SAE), compiled by l'Association des professionnels
pour l'économie numérique (APROGED). The SAE standard covers the design,
the necessary system components, and the operation of electronic archive
systems. For more information about ISO 14641-1: 2012, click here.

Certification of the Doxis4 (version 3) installation was issued by the independent certification authority SP Certifications London at Lakson Technology Private Limited.
