

**Press release**

**June 2, 2016**

**SER builds on the latest SharePoint generation as one of the first vendors worldwide to offer high-performing ECM**

## **Microsoft SharePoint 2016 gets tuned up**

**(June 2, 2016 – Bonn) SER is one of the first enterprise content management (ECM) vendors worldwide that supports SharePoint 2016. The deep integration of Doxis4 into the Microsoft solution now adds a comprehensive document management function (DMS) and audit-proof archiving to SharePoint 2016.**

The latest product generation of Microsoft SharePoint has something in common with its predecessor: comprehensive DMS functions continue to be missing. In other words, access to other sources of information, such as inbound mail or data from the ERP system, continue to be extremely limited in the SharePoint environment. Employees often have to conduct arduous searches throughout various sources and applications. Overall, a time-consuming and inefficient process.

As a Microsoft Gold Partner, [SER](#) has the right solution on hand with the Doxis4 SharePoint Portal Connector. It provides SharePoint 2016 users high-performing DMS functions that allow them to quickly and directly find and access all Doxis4 content from across the company via SharePoint. This includes inbound mail, records, documents, tasks, and process instances.

### **Audit-proof document archiving in SharePoint 2016**

What's more, the certified Doxis4 iECM suite enables companies to store documents that were created in teams in SharePoint Online/Office365 and SharePoint Server 2016 in an audit-proof and compliant way – regardless of whether these documents are stored locally or in the cloud.
